

ADVANTAGES

- Pre-drilled standing flanges to mate to existing HVAC equipment.
- An integral filter track for application of various impingement type filters designed for oil/water/mist removal.
- Filter track drains to facilitate liquid collection and routing to housing drain.
- A housing drain to remove captured materials for reclamation or disposal.
- 16-gauge galvanized steel construction. All components are weatherproof for interior or exterior installation.
- A short in-line depth of only 12" conserving valuable space for other HVAC system components.

Application

Removal of process oil from grinding/ process applications. Removal of humidification mists to prevent water collection on downstream filters and HVAC components. Removal of water mists associated with high velocity outdoor air intakes.
